JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

XXIV. A Letter from Mr. James Yonge, F. R. S. to Dr. Hans Sloane, R. S. Secr. containing the Case of a Woman who had her Menses regularly to 70 Years of Age.

Plymouth, July 17. 1713.

SIR,

T Lamerton, fifteen Miles from this Town, dy'd lately a Woman of Eighty fix Years old; who to the Age of seventy had her Menses plentiful and regular. At that time they ceased, and soon after followed the like Eslux from the Hamorrhoids, which continued till she got on the wrong side of Fourscore.

She was till then healthful and strong, of a vigorous Aspect, smooth, plump, and florid in Countenance, like one not half so Old: Her Appetite was very good; her Intellects clear and sound; and her sight so perfect, that the could to the last thread a Needle, and read small Print without Glasses.

When that Flux ceased, she became Gouty; and about one Year before she dy'd, there arose an Apostumation on one of her Wrists, which open'd, and discharged much chalky Matter and some Stones. The Day she dy'd, she arose out of her Bed; and after performing some Christian Devotions, expired.

She was never fick before the Hemorrhoidal Flux stopt, except once at Exeter, where she was born, and then lived, she became infected with what they called the Plague: It ended in a critical Abcess in one of the Emunstories; and which is very strange, during all the time

of that Sickness, she nursed a Male Child, who is yet alive, and one of our Faculty; from whom I have this Relation.

This History will afford occasion to divers Speculations, which I will not attempt to anticipate, but refer them to the Royal Society. I am, &c.

JAMES YONGE.

XXV. The Description of a Tartarian Plant, call'd Gin-seng; with an Account of its Virtues. In a Letter from Father Jartoux, to the Procurator General of the Missions of India and China. Taken from the Tenth Volume of Letters of the Missionary Jesuits, Printed at Paris in Octavo, 1713

Peking, April 12. 1711.

Reverend Father,

the Emperor of China, gave us an Opportunity of feeing the famous Plant Gin-seng, so much esteem'd in China, and so little known in Eurspe. Towards the end of July 1709. we arrived at a Village not above four similal Leagues distant from the Kingdom of Corea, which is inhabited by those Tartars called Calca tatze. One of these Tartars went and sound upon the Neighbouring Mountains sour Plants of the Gin-seng, which he brought us entire in a Basket: I took one of them, and designed it, in its exact Dimensions as well as I could
